

Transform Enterprise Knowledge into **Operational Intelligence**

Harness AI to capture, understand, generate, and automate enterprise knowledge enabling faster decisions, optimized processes, and scalable business transformation.

Capture. Understand. Generate. Automate.

The Epiplex AI Intelligence Framework

Epiplex AI creates a continuous intelligence cycle that converts enterprise knowledge into business value.

Capture

Automatically capture enterprise knowledge from every source—including documents, applications, meetings, videos, audio, and user interactions.

Understand

Leverage AI to interpret business context, identify process variations, compare workflows, and make enterprise knowledge instantly searchable.

Generate

Automatically create enterprise-ready assets such as SOPs, BPMN process maps, assessments, training materials, test scenarios, and automation-ready documentation.

Automate

Transform captured knowledge into intelligent workflows, automation scripts, and agentic AI capabilities that streamline execution across enterprise applications.

AI-Powered Enterprise Capabilities

Capture Enterprise Knowledge

- Convert meeting recordings into BPMN process maps
- Transform training videos into detailed (SOPs)
- Extract and classify information from enterprise documents
- Capture business workflows across any enterprise application

Understand Business Processes

- Compare SOP versions and identify process changes
- Benchmark employee workflows against best practices
- Search application screens using AI-powered visual recognition
- Locate keywords instantly across videos, audio recordings, and documents

Automate Enterprise Work

- Generate automation-ready workflows and scripts
- Execute repetitive business tasks through playback automation
- Enable Agentic AI to perform enterprise activities across applications
- Accelerate digital transformation with process-aware automation

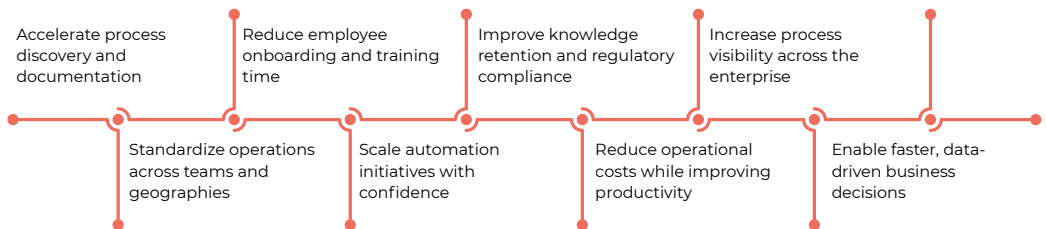

Generate Operational Assets

- Standard Operating Procedures (SOPs)
- BPMN Process Maps
- Employee Assessments
- Training Content

Built for the Enterprise

- Flexible cloud, on-premise, or hybrid deployment
- Enterprise-grade security and governance
- Built-in PII protection and compliance controls
- Supports ERP, CRM, legacy systems, virtual environments, and Citrix

Business Impact

The Journey to Autonomous Enterprise Operations

Capture Once. Transform Continuously.
